WORK EXPERIENCE

Full Stack Developer

2019– current

Independent Contractor

I have extensive experience in managing end-to-end development, including analyzing requirements, prioritizing tasks, and delivering high-quality code. My work includes developing in ECMAScript 6 and TypeScript, handling UI/UX design, and optimizing visuals with CSS, Sass, and Styled-components. I have also integrated Google Maps for enhanced functionality and facilitated real-time communication through websockets.

In addition to front-end work, I have a strong background in back-end development with Node.js and Express, including projects utilizing GraphQL. I work with relational and non-relational databases, such as MongoDB, PostgreSQL, and MySQL, ensuring seamless deployment with Netlify and AWS Lambda. I have also worked on various PHP-Laravel projects, primarily deploying on Hostinger. This includes developing multiple WordPress pages and integrating WooCommerce and other WordPress plugins. I collaborate closely with clients to understand their needs, define project scopes, and provide ongoing support.

Front End Developer

2022

Intive

During my tenure at Intive, I joined with enthusiasm to contribute my skills. However, due to reduced projects, the company underwent layoffs before formal assignments. Despite this, I stayed proactive, pursuing professional growth through courses and collaborating with colleagues in similar situations to leverage learning resources.

Photographer & Small Business Operator

2018–2022

I founded and operated a photography business, where I managed all aspects of the business, including client relations, marketing, and project management. This experience developed my creative and technical skills, producing high-quality images with a keen eye for detail, while also gaining experience in design.

Back End Developer

2013 – 2016

MIDES

I have contributed to a robust ASP.NET codebase using C#, where I led data model creation with SQL Server and PostgreSQL. I orchestrated seamless database migration, integrating business intelligence. I collaborated with stakeholders for tailored solutions, actively participated in planning, mentored juniors, and fostered teamwork. I practiced Agile and Scrum methodologies.
